

Sensory play tray - with animals & ice

Put some small plastic animals or toys, or small stones, pebbles, leaves etc in a small shallow tub. Partly cover them in water. Pop them in the freezer (or outside if it's freezing) overnight. When frozen, put the ice block into a bigger tray or washing up bowl for playing with.

Babies and toddlers will be intrigued by the cold and texture of the ice. Can they help the animals or objects escape? You could give them small

plastic bottles filled with warm water, salt and spoons to scrape or melt the ice.
